Consider ultrasound and a genetic consultation.			
GENERAL TEST INFORMATION			SDL
This screening provides an estimation of risk, not a diagnosis. Incorrect or incomplete information may significantly alter results. Risks are adjusted for donor eggs, frozen embryos, and IVF. Results may be unreliable in twin pregnancies with a fetal demise. Results are not available for diabetic-twin pregnancies or for triplets and higher-order multiples. A positive result occurs when the risk for Down syndrome equals or exceeds 1 in 270, when the risk for trisomy 18 equals or exceeds 1 in 100, or when the AFP MoM equals or exceeds 2.5 (5.33 MoM for twins). Screen results and family history influence individual risk. If there is a family history of a neural tube defect, chromosome abnormality, or other inherited condition, consider the option of a genetic consultation. For further information, please contact the maternal screening laboratory at 1-800-533-1710.			
Other Information			SDL
This is a repeat test
