Mumps Virus Ab, IgG and IgM, CSF					
RECEIVED: 08/14/2013 07:22 **REPORTED:** 08/14/2013 07:54					
Mumps Virus Ab, IgG	AB	1:40		<1:5	SDL
Detection of organism-specific antibodies in the CSF may suggest central nervous system infection. However, these results are unable to distinguish between intrathecal antibodies and serum antibodies introduced into the CSF at the time of lumbar puncture or from a breakdown in the blood-brain barrier. The results should be interpreted with other laboratory and clinical data prior to a diagnosis of central nervous system infection.					
Mumps Virus Ab, IgM	AB	>=1:10		<1:10	SDL
Results suggest recent infection. SEMI-URGENT RESULT Detection of organism-specific antibodies in the CSF may suggest central nervous system infection. However, these results are unable to distinguish between intrathecal antibodies and serum antibodies introduced into the CSF at the time of lumbar puncture or from a breakdown in the blood-brain barrier. The results should be interpreted with other laboratory and clinical data prior to a diagnosis of central nervous system infection.
