Fluorometric Enzyme Assay				
TPP1, F	304	nmol/h/mg Prot	69-934	MCR
PPT1, F	132	nmol/h/mg Prot	30-194	MCR
Interpretation				MCR
In this sample the activity of both Palmitoyl-Protein Thioesterase 1 and Tripeptidyl Peptidase 1 enzymes are normal. These results indicate that this individual does not have a defect in either the CLN1 or CLN2 gene. However, this does not rule out other forms of neuronal ceroid lipofuscinosis. If clinically indicated, additional testing by Electron Microscopy (MML # 4993) is recommended. Please contact the Biochemical Genetics consultant or genetic counselor on call (1-800-533-1710) to determine the best testing strategy or if you have any questions.
