Leukemia Lymphoma Phenotype, Tissue
RECEIVED: 06/20/2013 11:19 **REPORTED:** 06/20/2013 11:25

Microscopic Description: MCR

A Wright-Giemsa stained slide prepared from the flow cytometry specimen was examined for quality purposes.

Final Diagnosis: MCR

Lymph node, specimen for flow cytometric analysis (S13-0):

No monotypic B-cell population, phenotypically abnormal T-cell population or blast cell population detected.

Comment:
Some lymphomas cannot be detected by flow cytometric analysis. Furthermore, these findings can also be seen in association with Hodgkin lymphomas, metastatic tumors or other neoplasms. Correlation with the clinical and morphologic features is required for a final diagnosis.

Reviewed by: Tammy Bernatz 2013.06.20 11:25:10
Analyte Specific Reagent: This test was developed and its performance characteristics determined by Mayo Clinic. It has not been cleared or approved by the U.S. Food and Drug Administration.

Comment: MCR

Results:
Blasts: No increase

B-cells: No monotypic

T-cells/NK-cells: No increase

Viability: Acceptable
Viable lymphocytes (7-AAD): 99%

Quality Assessment:
Specimen received within validated guidelines
