Alpha-Galactosidase, S	0.074	U/L 0.074-0.457 MCR
Interpretation		MCR

In this serum sample the activity of alpha-Galactosidase A is within the normal range. However please note that enzyme analysis is not sufficiently sensitive to detect all affected females. Sixty-seven percent of affected females are expected to have normal enzyme activities using this method. (see Wilcox WR et al. Mol Genet Metab. 2008;93:112-128). If clinically indicated, consider molecular genetic analysis of the GLA gene. Please contact the Biochemical Genetics Consultant or Genetic Counselor on call (1-800-533-1710) if you have any questions.
