

**TORCH PROFILE IGG
#800270**

EXPLANATION: Two members of this profile will change. The reference values will change for test #800070 Rubella Antibodies, IgG, Serum.

Prior to immunization or exposure to rubella virus, the expected result for rubella IgG testing is “Negative.” A positive result indicates that a patient has responded to immunization or has been naturally exposed to the virus. The following change to the reference value for this test is intended to create consistency with other infectious disease serology reports, where the reference value defines the expected result prior to exposure or immunization.

CURRENT REFERENCE VALUE: Positive

NEW REFERENCE VALUE: Negative

There will be a reporting title change and therefore a file definition change for test #800030 Cytomegalovirus (CMV) Antibodies, IgG, Serum.

CURRENT REPORTING TITLE: CMV IgG

NEW REPORTING TITLE: Cytomegalovirus Ab, IgG, S

NOTE: There will be no other changes to this profile at this time.
