ANTIBODY NOT DETECTED

REFERENCE RANGES: IgG <1:16
IgM <1:20

Recent or current Colorado Tick Fever is indicated by a four-fold or greater rise in IgG titer between acute and convalescent sera and/or an IgM level of 1:20 or greater.

This assay was developed and its performance characteristics have been determined by Focus Diagnostics. It has not been cleared or approved by the U.S. Food and Drug Administration. The FDA has determined that such clearance or approval is not necessary. Performance characteristics refer to the analytical performance of the test.
