Streptozyme Titration Streptozyme Titer		<1:100	REPORTED 0	7/20/2012 15:52	Y03

REFERENCE RANGE: <1:100

INTERPRETIVE CRITERIA:

<1:100 Antibody not detected
> or = 1:100 Antibody detected

This assay detects antibodies to multiple extracellular antigens of group A streptococcus, including anti-streptolysin O, anti-streptokinase, and anti-hyaluronidase. Such antibodies may develop in streptococcal pharyngitis, rheumatic fever, pyoderma, glomerulonephritis, and other related conditions. Tests have shown that approximately 80% of specimens positive by Streptozyme have anti-streptolysin O, and 10% have anti-streptokinase and/or anti-hyaluronidase. The remaining 10% of positive samples are apparently due to antibodies to other streptococcal extracellular antigens or to the combined effect of several antibodies that, individually, would fall below detectable limits.
