ADAMTS13 Activity and Inhibitor Profile

ADAMTS13 Activity Assay 92

For research use only. ADAMTS13 Interpretation

ADMTS13 Interpretation

No laboratory evidence of ADAMTS13 deficiency. A normal ADAMTS13 activity level does not completely exclude a clinical diagnosis of thrombotic thrombocytopenic purpura (TTP). Recommend clinical correlation.

Non-specific substrate proteolysis by other plasma proteases or recent plasma transfusion or exchange may falsely raise ADAMTS13 activity. Markedly elevated endogenous von Willebrand factor (VWF), hyperlipidemia, hemolysis with plasma free hemoglobin greater than 2g/L, hyperbilirubinemia (greater than 6mg/dL) may falsely lower ADAMTS13 activity

For research use only.
