Familial Amyloidosis, DNA Sequence			REPORTED 07/13/2012 10:01		
Specimen		Blood			MCR
Specimen ID		1038183			MCR
Order Date		21 May 2012 13:18			MCR
Reason For Referral		Possible diagnosis of transthyretin (TTR)-associated familial amyloidosis. Test for the presence of a mutation in the TTR gene.			MCR
Method		Bi-directional sequence analysis was performed to test for the presence of a mutation in all coding regions and intron/exon boundaries of the TTR gene. Mutation nomenclature is based on GenBank accession number NM 000371.			MCR
Result		The following heterozygous sequence change was detected: Exon: 4 DNA change: c.424G>A Amino acid change: p. V122I (Val122Ile) Classification: DELETERIOUS			MCR
Interpretation		This alteration is a known deleterious mutation. This result is consistent with a diagnosis of TTR associated familial amyloidosis. Since a mutation has been identified, testing of at risk family members is possible. Mutation-specific testing for TTR-associated familial amyloidosis is available at Mayo Medical Laboratories by ordering AMYKM/83705 Familial Amyloidosis Known Mutation. Please contact the Molecular Genetics Laboratory at 1-800-533-1710 with questions about this test. A genetic consultation may be of benefit. Unless reported or predicted to cause disease, alterations found deep in the intron or alterations that do not result in an amino acid substitution are not reported. These and common polymorphisms identified for this patient are available upon request. CAUTIONS: Rare polymorphisms exist that could lead to false negative or positive results. If results obtained do not match the			MCR

clinical findings, additional testing should be considered.

Test results should be interpreted in context of clinical findings, family history, and other laboratory data. Misinterpretation of results may occur if the information provided is inaccurate or incomplete.

Bone marrow transplants from allogenic donors will interfere with testing. Call Mayo Medical Laboratories for instructions for testing patients who have received a bone marrow transplant.

Laboratory developed test.
