RMSF IgM	AB	DETECTED			Y03 8
REFERENCE RANGE: NOT DETECTED Q Fever IgG Phase I Screen	AB	POSITIVE			Y03 8

Q Fever Antibody testing includes differentiation of antibodies to Phase I and Phase II antigenic variants. Coxiella burnetii, which causes Q Fever, undergoes transitions between Phase I and Phase II states. These phases are serologically distinguishable and useful in the serodiagnosis of acute and chronic disease.

In some cases, the ratio of titer of phase II to phase I may indicate the stage of the disease.
