Alcohol Biomarkers

RECEIVED: 06/10/2013 10:16 REPORTED: 06/10/2013 14:56 Ethyl Glucuronide NEGATIVE

Y07

This specimen was screened by immunoassay. Any positive result was confirmed by liquid chromatography with tandem mass spectrometry (LC/MS/MS)  $\,$ 

The following threshold concentrations were used for this analysis:

Drug screening threshold confirmation threshold Ethyl Glucuronide 500 ng/ml 500 ng/ml Ethyl Sulfate 250 ng/ml

Alternative explanations should be explored for any positive finding.

Please note that incidental exposure to alcohol may result in detectable levels of ETG and/or ETS. The Center for Substance abuse Prevention (CSAP) advises caution in interpretation and use of biomarkers alone to assess alcohol use. ETG/ETS results should be interpreted in the context of all available clinical and behavioral information.
