RECEIVED: 08/26/2013 15:18 **REPORTED:** 08/27/2013 10:51

Microscopic Description:

MCR

A Wright-Giemsa stained slide prepared from the flow cytometry specimen was examined for quality purposes.

Supplemental PDF Report available at:

<https://test.mmlaccess.com/Reports/C7028846-PAjBbcWbMi.ashx>

Final Diagnosis:

MCR

Spleen, specimen for flow cytometric analysis (13-12-11):

No monotypic B-cell population, phenotypically abnormal T-cell population or blast cell population detected.

Comment:

Some lymphomas cannot be detected by flow cytometric analysis. Furthermore, these findings can also be seen in association with Hodgkin lymphomas, metastatic tumors or other neoplasms. Correlation with the clinical and morphologic features is required for a final diagnosis.
