68kD (hsp-70) antibodies Negative Y04

**RECEIVED:** 12/06/2013 08:04 **REPORTED:** 12/06/2013 08:05

Serology Comments:

Antibodies to inner ear antigen (68kD) occur in approximately 70% of patients with autoimmune hearing loss. The antibody tests to this 68kD antigen parallel with disease activity. In addition, a majority of patients positive for antibodies to 68kD are responsive to corticosteroid treatment. (Hirose et al: The Laryngoscope 109:1769-1999)

This test was developed and its performance characteristics determined by IMMCO. It has not been cleared or approved by the U.S. Food and Drug Administration.
