

CHAIN OF CUSTODY DRUG TESTING

Test ID: Multiple tests

EXPLANATION: In situations where Chain of Custody is needed, the following tests will be available as new Chain of Custody orderable codes.

SPECIMEN REQUIREMENTS: Requirements can be found on the Mayo Medical Laboratories website test updates page (<http://www.mayomedicallaboratories.com/test-notifications/index.html>), or in the test catalog after the effective date.

If Chain of Custody handling is desired, we have developed two convenient kits that include specimen containers, seals, and documentation to satisfy legal requirements for chain of custody. Order the drug test needed and submit the specimen in the appropriate kit below.

1. For blood, plasma, serum, or urine, use Chain-of-Custody Kit (Supply T282).
2. For meconium, use Chain-of-Custody Kit (Supply T653).

NOTE: Please order new kits to be used beginning on the effective date. Old kits should be discarded after the effective date.
