Test	Flag	Results	Unit	Reference Value	Perform Site*
Enoxaparin Dependent Platelet Ab enoxaparin Low Dose		2	REPORTED 05/2	9/2012 15:16	Y01
enoxaparin High Dose		5	%		5 Y01 5
enoxaparin Result		Negative			Y01 5

A positive result requires release of serotonin from target platelets in the presence of patient serum and low dose (0.2 U/ml) low molecular weight heparin (enoxaparin) of > 20%, together with inhibition of release (< 20%) with high dose (100 U/ml) low molecular weight heparin (enoxaparin). Results obtained with this patient's serum were negative. These results argue against, but do not completely rule out a diagnosis of Heparin-Induced Thrombocytopenia (HIT). Testing with low molecular weight heparin (enoxaparin) vs. unfractionated heparin has not been validated as a useful guide to clinical management.

This test was developed and its performance characteristics determined by BloodCenter of Wisconsin. It has not been cleared or approved by the FDA. However, the FDA has determined that such clearance or approval is not necessary. The test has been validated in house and is used for clinical purposes. It should not be regarded as investigational or for research. Our Laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) as qualified to perform high complexity clinical laboratory testing.
