			REPORTED 06/	13/2012 10:11	
SRP		Positive			Y09

Signal Recognition Particle (SRP) is a myositis specific autoantibody which is seen in 5-10% of adult and juvenile myositis. Symptoms often are acute onset of severe polymyositis with frequent myalgias, severe weakness and very high creatine kinase levels. Some adults experience cardiac involvement and palpitations. There is a poor response to therapy. This test was developed and its performance characteristics validated by RDL. The FDA has determined that approval for this test is not necessary. This is an analyte specific reagent (ASR) test.
