Amniotic Fluid Culture/Genetic Test		REPORTED 10/17/2012 14:12			
Specimen		Amniotic Fluid			MCR
Specimen ID		1059264			MCR
Order Date		17 Oct 2012 14:08			MCR
Reason For Referral		not provided			MCR
Method		Amniocyte culture			MCR
Interpretation					MCR
We have established a cell culture on this specimen for possible molecular or biochemical genetic testing. The cell culture ordered does not include cryopreservation and we cannot maintain this specimen indefinitely. Please call (800) 533-1710 ext. 42950 to inform the Cytogenetics Laboratory of your intentions. This specimen will be stored for six months from the date it was received in the Cytogenetics Laboratory (10/17/2012).					
Consultant		Sheila Marie Wilson			MCR
Report Date		17 Oct 2012 14:09			MCR
BWS/RSS Molecular Analysis		REPORTED 10/17/2012 14:11			
Specimen		Amniotic Fluid			MCR
Specimen ID		1038915			MCR
Order Date		17 Oct 2012 14:08			MCR
Reason For Referral					MCR
Suspected diagnosis of Beckwith Wiedemann syndrome (BWS).					
Method					MCR
Methylation-sensitive multiplex ligation-dependent probe amplification (MLPA) was used to test for the presence of large deletions, duplications and/or methylation defects in the IC1 (H19) and IC2 (LIT1) critical regions on chromosome 11p15.					
Result					MCR
IC1 (H19): hypermethylation IC2 (LIT1): hypomethylation No deletions or duplications were detected.					
Interpretation					MCR
Results are consistent with a diagnosis of Beckwith Wiedemann syndrome (BWS). This patient is at risk for developing clinical manifestations associated with BWS and should be monitored accordingly. In particular, abnormal methylation of H19 is associated with an increased risk for embryonal tumors. Appropriate screening procedures should be considered.

A genetic consultation may be of benefit.

CAUTIONS:
Test results should be interpreted in context of clinical findings, family history, and other laboratory data. Misinterpretation of results may occur if the information provided is inaccurate or incomplete.

Rare polymorphisms exist that could lead to false negative or positive results. If results obtained do not match the clinical findings, additional testing should be considered.

Bone marrow transplants from allogenic donors will interfere with testing. Call Mayo Medical Laboratories for instructions for testing patients who have received a bone marrow transplant.

For research use only.
