HIV 2 Antibody, IBL				REPORTED 09/24/2012 15:38	
HIV 2 Ab, Immunoblot		NEGATIVE			Y038

A Negative HIV-2 antibody Immunoblot result does not exclude HIV-2 infection since the time frame for seroconversion is variable. If acute HIV-2 infection is suspected, suggest testing a new plasma sample by an amplified nucleic acid test (HIV-2 DNA/RNA, unit code 49000). Testing for HIV-1 should also be considered.

Reference range: NEGATIVE

This test was performed using a kit that has not been cleared or approved by the FDA. The analytical performance characteristics of this test have been determined by Focus Diagnostics. This test should not be used for diagnosis without confirmation by other medically established means.

HIV-2 Ab Screen, S	AB	Reactive		REPORTED 09/24/2012 13:26	
				Negative	SDL
Confirmatory HIV-2 antibody immunoblot test is ordered. Confirmatory test is the definitive test for HIV-2 infection.
