Test	Flag	Results	Unit	Reference Value	Perform Site*
Blastomyces Ab, EIA, CSF	AB	Positive		REPORTED 11/02/2012 13:06 Negative	SDL
<p>Result suggests exposure to Blastomyces dermatitidis, but cannot distinguish between active disease and past infection. Results should be interpreted in the context of the clinical presentation, as well as other laboratory findings (e.g., fungal culture (Test Code 84389), immunodiffusion (Test Code 81541)).</p> <p>Detection of organism-specific antibodies in the CSF may suggest central nervous system infection. However, these results are unable to distinguish between intrathecal antibodies and serum antibodies introduced into the CSF at the time of lumbar puncture or from a breakdown in the blood-brain barrier. The results should be interpreted with other laboratory and clinical data prior to a diagnosis of central nervous system infection.</p>
