Test	Flag	Results	Unit	Reference Value	Perform Site*
Aspergillus Ag, S	AB	1.000	index	<0.5	SDL
<p>There is a potential for cross-reactivity of this assay with piperacillin/tazobactam (Zosyn), which may cause false-positive results. Positive results in patients treated with Zosyn should be interpreted cautiously and confirmed with other diagnostic measures. False-positive results are reported to occur at rates of 8-14% with this assay. For all positive patients, it is recommended that a new sample from the patient be collected for follow-up testing. Two or more consecutive positive results should be obtained from separately collected specimens before the patient is considered to have a positive Aspergillus Ag test.</p> <p>This is a qualitative test and the result index value should not be used to determine disease severity or monitor response to therapy.</p>					

* Performing Site:
