Positive 1:2

**SDL**  
**Reference Value**  
Negative

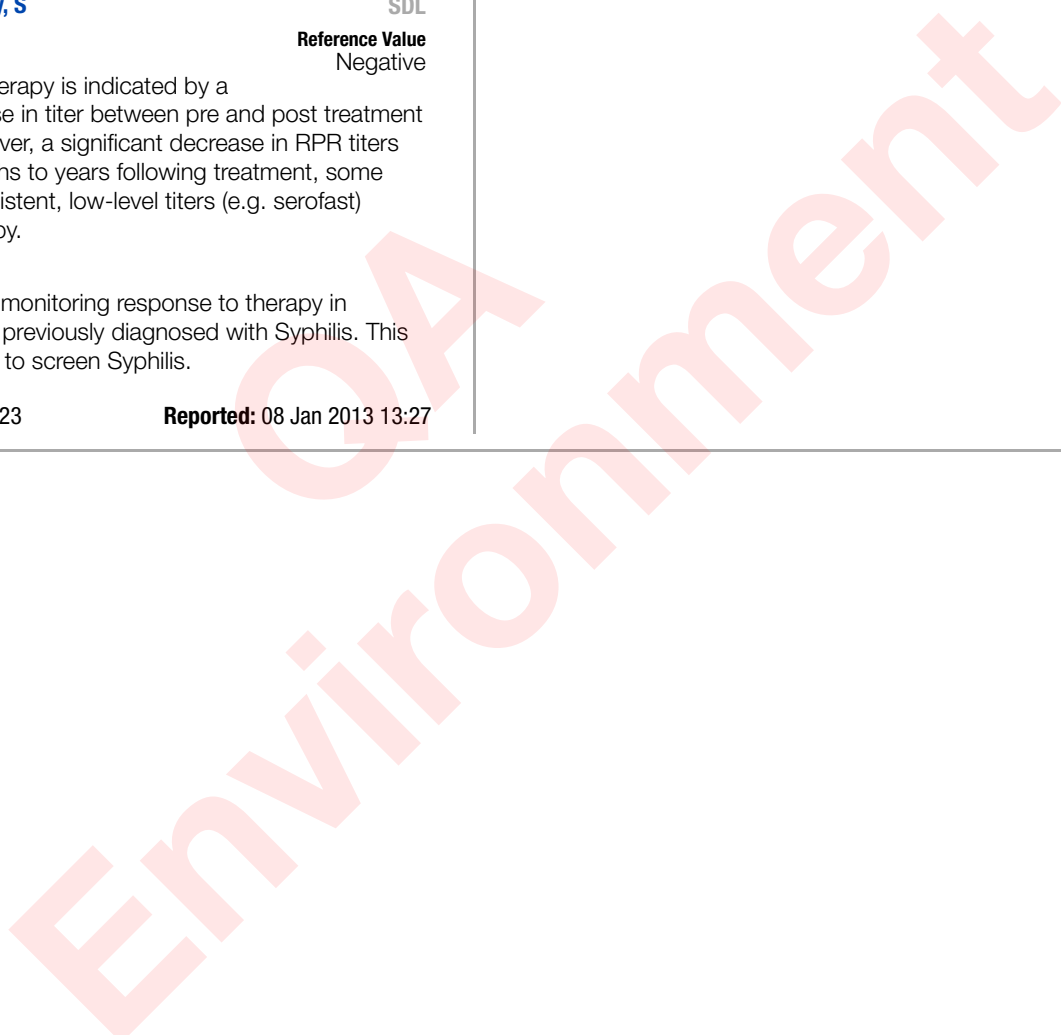

Response to therapy is indicated by a  $\geq 4$ -fold decrease in titer between pre and post treatment samples. However, a significant decrease in RPR titers may not occur for months to years following treatment, some patients may show persistent, low-level titers (e.g. serofast) despite adequate therapy.

**ADDITIONAL INFORMATION**

This test is intended for monitoring response to therapy in patients that have been previously diagnosed with Syphilis. This test should not be used to screen Syphilis.
