RPR, Response to Therapy, S	AB	Positive 1:2		REPORTED 01/08/2013 13:27 Negative	SDL
<p>Response to therapy is indicated by a > or =4-fold decrease in titer between pre and post treatment samples. However, a significant decrease in RPR titers may not occur for months to years following treatment, some patients may show persistent, low-level titers (e.g. serofast) despite adequate therapy.</p> <p>This test is intended for monitoring response to therapy in patients that have been previously diagnosed with Syphilis by a treponemal-specific test (e.g., FTA or ELISA). Positive results by this RPR test are not confirmed.</p>
