consultation. In addition, the MLD Foundation (1-800-617-8387; <http://mldfoundation.org>) provides information and support services for families and health care professionals. Please contact the Biochemical Genetics consultant or genetic counselor on call (1-800-533-1710) if you have any questions.

ADDITIONAL INFORMATION

Colorimetric Enzyme Assay

Interpretation

MCR

In this sample, arylsulfatase A activity is decreased. This result indicates that this individual may be affected with metachromatic leukodystrophy (MLD, OMIM 250100) or multiple sulfatase deficiency (OMIM 272200). However, please also note that individuals with pseudoarylsulfatase A deficiency can have results in this range but are otherwise unaffected with MLD (Dubois et al. Am J Hum Genet. 1977; 29: 191-4; Butterworth et al. Clin Genet. 1978; 14: 213-8). In the absence of clinical information, we recommend urine sulfatide analysis (MML test CTSA) to exclude pseudoarylsulfatase A deficiency as well as a genetics
