Pipecolic Acid, U	H	18.9		REPORTED 02/25/2013 12:53 nmol/mg Cr <=5.7	MCR
Interpretation In this sample, the excretion of pipecolic acid was elevated. This result is suggestive of a possible underlying peroxisomal disorder. If indicated, consider plasma very long-chain fatty acid analysis. If you are interested, there are opportunities for participating in research on these disorders. Methods to evaluate therapies of these disorders are coordinated at the Kennedy Krieger Institute in Baltimore, MD (Tel. 443-923-2750; Fax 443-923-2755; e-mail raymond@kennedykrieger.org) and at the Mayo Clinic in Rochester, MN (Tel. 507-284-3372; email renaud.deborah@mayo.edu). Gas Chromatography-Mass Spectrometry (GC-MS) Stable Isotope Dilution Analysis Reviewed By JANICE HELGESON
