NT-Pro BNP, S

125 pg/mL

MCR

Reference Value
≤140

NT-proBNP values less than 300 pg/mL have a 99% negative predictive value for excluding acute congestive heart failure. A cutoff of 1200 pg/mL for patients with an eGFR<60 yields a diagnostic sensitivity and specificity of 89% and 72% for acute congestive heart failure. NT-proBNP values greater than 450 pg/mL are consistent with CHF in adults under 50 years of age.
