

Patient ID SA00057305	Patient Name SAMPLEREPOR, LPAGF	Birth Date 1966-06-10	Gender F	Age 46
Order Number SA00057305	Client Order Number SA00057305	Ordering Physician Client, Client	Report Notes	
Account Information C7028846 DLMP Rochester		Collected 08 May 2013 00:00		

Lymphocyte Proliferation, Antigens

Interpretation

ⓘ MCR

Normal and robust proliferative responses to antigens - Candida (CA) and Tetanus toxoid (TT).

ADDITIONAL INFORMATION

Data are expressed as % proliferating cells of total specific cell population. The % Day 0 viability of the sample was determined using a flow cytometry assay which includes individual assessment of viable, apoptotic and dead cells. This method differs from the commonly used method of trypan blue dye exclusion which only identifies dead cells, and counts apoptotic cells along with the viable cells, resulting in an apparent higher cell viability. However, apoptotic cells do not contribute to cell proliferation and therefore accurate measurement of only viable cells provides meaningful information on the cells involved in stimulation and proliferative response. Strongly recommend using "critical ambient shipping boxes" available through Mayo Medical Laboratories (MML) inventory to ensure optimal transport of critical samples used for functional cellular assays.

Viab of Lymphs at Day 0

87.6 %

MCR

 Reference Value
 ≥75.0

Max Prolif of CA as % CD45

MCR

11.7 %

 Reference Value
 ≥5.7

Max Prolif of CA as % CD3

MCR

12.8 %

 Reference Value
 ≥3.0

Max Prolif of TT as % CD45

MCR

9.6 %

 Reference Value
 ≥5.2

Max Prolif of TT as % CD3

MCR

10.5 %

 Reference Value
 ≥3.3

Antigen Comment

MCR

Lymphocyte proliferative responses are affected by sample age. Samples received between 24–48 hours post-collection can show significant decrease in lymphocyte proliferative responses. Caution should be used when interpreting the results and clinical correlation is strongly recommended. Suggest repeat testing when clinically appropriate.
