Prothrombin G20210A Mutation, B

PTNT Interpretation

ⓘ MCR

This individual DOES NOT have the Prothrombin G20210A mutation. Although the Prothrombin G20210A mutation is absent, the individual may have other genetic and environmental risk factors for thrombosis. If clinically indicated, suggest Coagulation Consultation 83093 (Thrombophilia Profile) to complete the evaluation for an inherited or acquired thrombosing disorder (i.e., thrombophilia). Consider genetic consultation and counseling of potentially affected family members regarding laboratory testing.

ADDITIONAL INFORMATION

This test is a direct mutation analysis of leukocyte genomic DNA by the Invader Assay system (Invader, Hologic Inc, Madison, WI).

Prothrombin G20210A Mutation, B

MCR

Negative

 Reference Value
 Negative
