Spotted Fever Group Ab, IgG, IgM, S

Spotted Fever Group Ab, IgG, S

SDL

1:128

Reference Value
<1:64

Abn

Single IgG serum endpoint titers of 1:64 or 1:128 are suggestive of infection at an undetermined time and may be indicative of either past infection or early response to a recent infection. The best serologic evidence of recent rickettsial infection is a four-fold or greater increase in titer between two serum samples drawn 1–2 weeks apart and tested in parallel.

Spotted Fever Group Ab, IgM, S

SDL

≥1:64

Reference Value
<1:64

Abn

IgM titers of $\geq 1:64$ are considered presumptive evidence of recent or current infection. SEMI-URGENT RESULT

Received: 18 Jul 2013 10:56
