ZAP-70
RECEIVED: 08/26/2013 15:20 **REPORTED:** 08/27/2013 10:23

Final Diagnosis

MCR

The B-cells are negative for ZAP70 (10%). The CD3 positive T-cells express ZAP70.

Negative ZAP70 expression (<20% of B-cells) has been associated with a better outcome in patients with chronic lymphocytic leukemia. ZAP70 expression is typically constant throughout the patient's clinical course and thus is still a valid risk marker regardless of when it is evaluated. Its role in other B-cell disorders has not been defined or clarified and cannot be assumed to add any additional clinical or diagnostic value in non-CLL patients.

Reviewed by: Steven Bashynski 2013.08.27 10:23:28
 Flow cytometric immunophenotyping was performed on the peripheral blood specimen with antibodies directed against CD3, CD19 and ZAP70.

Analyte Specific Reagent: This test was developed and its performance characteristics determined by Mayo Clinic. It has not been cleared or approved by the U.S. Food and Drug Administration.
