REPORTED 07/13/2009 14:07

Adenovirus Ab

Ab <1:8

REFERENCE RANGE: <1:8
INTERPRETIVE CRITERIA:

<1:8 Antibody Not Detected
> or = 1:8 Antibody Detected

Single titers of > or = 1:64 are indicative of recent or current infection. Titers of 1:8 - 1:32 may be indicative of either past or recent infection, since CF antibody levels persist for only a few months. A four-fold or greater increase in titer between acute and convalescent specimens confirms the diagnosis.

This test was developed and its performance characteristics have been determined by Focus Diagnostics. Performance characteristics refer to the analytical performance of the test.

Test Performed by: Focus Diagnostics, Inc.

rmed by: Focus Diagnostics, Inc 5785 Corporate Avenue Cypress, CA 90630-4750

Medical Director, Alfred Lui, MD
