Printed 10/26/2009 14:24	(507)266-5730			

Test Flag Results Unit Value Site*

Schistosoma IgG Antibody (Serum)

<1.00

Schistosoma IgG

INTERPRETIVE CRITERIA:

<1.00 Antibody Not Detected
> or = 1.00 Antibody Detected

This assay utilizes the microsomal fraction of adult S. mansoni worms (MAMA) as antigen, and is thus highly specific (99%) and sensitive (96%) for detection of infection caused by S. mansoni. Although the assay is also highly specific for infections caused by other Schistosoma species (S. japonicum, S. haematobium, S. mekongi), its sensitivity for these infections is lower (55%). Antibody levels do not correlate with intensity of infection.

This test was developed and its performance characteristics have been determined by Focus Diagnostics. Performance characteristics refer to the analytical performance of the test.

Test Performed by: Focus Diagnostics, Inc. 5785 Corporate Avenue

Cypress, CA 90630-4750

Medical Director, Alfred Lui, MD
