## Ristocetin Inhibitor Assay Scrn, P

MCR

IMPRESSION: 1) No evidence of a specific inhibitor of von Willebrand factor (VWF) ristocetin cofactor activity. 2) Von Willebrand factor (VWF) ristocetin cofactor activity is undetectably low (less than 12%; normal 55-200%). 3) See comments and suggest clinical correlation.

COMMENTS: A 4:1 mixture of patient:normal plasma was assayed for von Willebrand factor (VWF) ristocetin cofactor activity after 1 hour incubation, and shows no evidence that patient plasma has von Willebrand factor (VWF) ristocetin cofactor inhibitory activity, within assay sensitivity.

Results telephoned to the office of Dr. Vera Malkovska 202-877-2843) who ordered this testing. If additional data or case discussion are desired, please contact Dr. William L. Nichols at the Mayo Special Coagulation Laboratory (1-800-533-1710).
