Lupus Anticoagulant Profile Testing begins with:
- Prothrombin Time (PT), Plasma
- Activated Partial Thromboplastin Time (APTT), Plasma
- Dilute Russell’s Viper Venom Time (DRVVT), Plasma

An interpretive report is included with this profile. If any tests are abnormal, all results will be reviewed by a coagulation consultant.

Additional assays may be performed if further clarification or confirmation is necessary based on preliminary review. These may include:
- Coagulation Factor Assays
- Bethesda Units
- Fibrinogen
- Soluble Fibrin Monomer
- Staclot Lupus Anticoagulant
- D-Dimer

Unfractionated/low-molecular weight heparin or direct thrombin inhibitor (eg, dabigatran, argatroban) warfarin or low concentration of direct anti-Xa inhibitor (eg, rivaroxaban, apixaban, or edoxaban)

An interpretive report is included with this profile. If any tests are abnormal, all results will be reviewed by a coagulation consultant.
