

Mycobacterial Culture Algorithm

*Nucleic acid probes used for identification, when applicable, include those for *Mycobacterium avium*-intracellulare complex, *Mycobacterium gordonae* and *Mycobacterium tuberculosis* complex. MALDI-TOF mass spectrometry or 16S rDNA sequencing is used for identification, when applicable, for slowly and rapidly growing *Mycobacterium* species and aerobic actinomycetes (including *Nocardia* species and *Streptomyces* species).
