TEST ID: 63036
PHOSPHOLIPASE A2 RECEPTOR (PLA2R) IMMUNOFLOUORESCENT STAIN, RENAL

USEFUL FOR
Distinguishing primary membranous nephropathy from secondary membranous nephropathy

CLINICAL INFORMATION
Membranous nephropathy is the most common cause of nephrotic syndrome in white adults. Eighty-five percent of membranous nephropathy cases are primary/idiopathic and the other 15% are secondary. Phospholipase A2 receptor (PLA2R) is an antigen located on podocytes. The majority of cases of primary membranous nephropathy have circulating autoantibodies against PLA2R.

SPECIMEN REQUIRED
Specimen Type: Formalin-fixed, paraffin-embedded tissue block or 3 unstained glass, "positively charged" slides with formalin-fixed, paraffin-embedded tissue (cut at 3-4 microns)
Container/Tube: Pathology Packaging Kit (Supply T554) Serum gel
Additional Information: A pathology/diagnostic report is required.

INTERPRETATION
This test, (when not accompanied by a pathology consultation request) will be reported as either positive or negative.

If additional interpretation/analysis is needed, please request 70012 / Pathology Consultation along with this test and send the corresponding renal pathology light microscopy and immunofluorescence (IF) slides (or IF images on a CD), electron microscopy images (prints or CD), and the pathology report.
