**Hepatitis E Antibody IgG**
**HEV IgG**
**DETECTED**
**REF**
**REFERENCE RANGE: NOT DETECTED**

Hepatitis E virus (HEV) is a major cause of enteric non-A hepatitis worldwide. HEV IgG is typically detected within one month after infection, and persists for months to years after recovery.

Approximately 20% of the US population is positive for HEV IgG, indicating that HEV exposure is more common than previously thought.

This test was performed using a kit that has not been cleared or approved by the FDA. The analytical performance characteristics of this test have been determined by Focus Diagnostics. This test should not be used for diagnosis without confirmation by other medically established means.

Test Performed by: Focus Diagnostics, Inc.  
 5785 Corporate Avenue  
 Cypress, CA 90630-4750
