Enterovirus Panel II, CF, S

Coxsackie A2 Ab	<1:8	REF
Coxsackie A4 Ab	<1:8	REF
Coxsackie A7 Ab	<1:8	REF
Coxsackie A9 Ab	<1:8	REF
Coxsackie A10 Ab	<1:8	REF
Coxsackie A16 Ab	<1:8	REF

REFERENCE RANGE: <1:8

INTERPRETIVE CRITERIA:

<1:8 Antibody Not Detected

> or = 1:8 Antibody Detected

Single titers of > or = 1:32 are indicative of recent infection. Titers of 1:8 or 1:16 may be indicative of either past or recent infection, since CF antibody levels persist for only a few months. A four-fold or greater increase in titer between acute and convalescent specimens confirms the diagnosis. There is considerable crossreactivity among enteroviruses; however, the highest titer is usually associated with the infecting serotype.

This test was developed and its performance characteristics have been determined by Focus Diagnostics. Performance characteristics refer to the analytical performance of the test.

Poliovirus 2 Ab	<1:8	REF
Poliovirus 3 Ab	<1:8	REF

REFERENCE RANGE: <1:8

INTERPRETIVE CRITERIA:

<1:8 Antibody Not Detected

> or = 1:8 Antibody Detected

Because CF antibody levels usually persist for only a few months, any measurable titer may indicate recent exposure. Single titers > or = 1:32 provide strong evidence for recent exposure. A four-fold or greater increase in titer between acute and convalescent specimens confirms recent exposure or infection.

This test was developed and its performance characteristics have been determined by Focus Diagnostics. Performance characteristics refer to the analytical performance of the test.
