15,5 wk,d		This screening provides an estimation of risk, not a diagnosis. Incorrect or incomplete information may significantly alter results. Risks are adjusted for donor eggs, frozen embryos, and IVF.	
GA used in risk estimate	SDL	Results may be unreliable in twin pregnancies with a fetal demise. Results are not available for pregnancies with triplets and higher-order multiples.	
Scan estimate		A positive result occurs when the risk for Down syndrome equals or exceeds 1 in 270, when the risk for trisomy 18 equals or exceeds 1 in 100, or when the AFP MoM equals or exceeds 2.5.	
AFP	SDL	Screen results and family history influence individual risk. If there is a family history of a neural tube defect, chromosome abnormality, or other inherited condition, consider the option of a genetic consultation.
