

Epstein-Barr Virus (EBV) Antibody Profile,
Serum

Patient ID SA00046095	Patient Name SAMPLEREP, SEBV A	Birth Date 1971-09-28	Gender F	Age 40
Order Number SA00046095	Client Order Number SA00046095	Ordering Physician KARON, BRAD	Report Notes	
Account Information C7028846 DLMP Rochester		Collected 06 Jun 2012 08:44		

EBV Ab Profile, S

EBV VCA IgM Ab, S

Positive

SDL
Reference Value
Negative

EBV VCA IgG Ab, S

Positive

SDL
Reference Value
Negative

EBNA Ab, S

Positive

SDL
Reference Value
Negative

Interpretation

Results may suggest recovery or reactivation.

ADDITIONAL INFORMATION

In most populations, at least 90% of the adult population will have been infected with EBV sometime in the past and therefore, will be positive for anti-VCA/IgG and anti- EBNA. Antibodies to EBNA develop 6–8 weeks after primary infection and remain present for life. Presence of VCA/ IgM antibodies indicates recent primary infection with EBV.
