≤6.5

Patients with MPS IV (Morquio), MPS VI (Maroteaux-Lamy) and MPS VII (Sly) are not reliably detected due to the inconsistent excretion of glycosaminoglycans in these syndromes. False negative (normal) results have been documented. We recommend proceeding with direct enzyme analysis if these syndromes are suspected.

Please contact the Biochemical Genetics consultant or genetic counselor on call (1-800-533-1710) if you have any questions.
