Abstinence

1.0 d

Two to seven days of abstinence recommended for fertility testing. Patient reported that his days of abstinence did not fall within the recommended range at testing and thus, test results may not accurately reflect patient's fertility status.

Comment

MCR

An unapproved method was used for semen collection. An unapproved lubricant was used for semen collection. The first and middle portions of ejaculate missed specimen container. Thus, test results may not accurately reflect patient's fertility status. If reported, the specimen's appearance, volume, pH and viscosity were provided by referring personnel.
