

Patient ID SA00055109	Patient Name SAMPLEREPOR, TGF1	Birth Date 1966-06-10	Gender F	Age 46
Order Number SA00055109	Client Order Number SA00055109	Ordering Physician UNKNOWN, PROVIDER	Report Notes	
Account Information C7028846 DLMP Rochester		Collected 14 Mar 2013 22:48		

TGFBR1, Full Gene Sequence

TGFBR1 Full Gene Sequence

TGFBR1 Result

MCR

One copy of the following mutation was detected in TGFBR1:
Exon 5, nucleotide c. 868G>A, amino acid p. Asp290Asn (p. D290N).

NM_004612.2).

A genetic consultation may be of benefit.

A list of common polymorphisms identified for this patient is available from the lab upon request.

TGFBR1 Interpretation

MCR

This TGFBR1 mutation is consistent with the Loeys-Dietz features observed in this individual. Appropriate surveillance and management strategies should be considered.

CAUTIONS:

Rare polymorphisms exist that could lead to false negative or positive results. If results obtained do not match the clinical findings, additional testing should be considered.

Since a mutation has been identified in the TGFBR1 gene in this individual, genetic testing for this specific mutation in other family members is recommended. Please contact the laboratory at 1-800-533-1710 or the on-line test catalog at www.mayomedicallaboratories.com for information about how to order the test for TGFBR1 Gene, Known Mutation (89460). Please refer to family number when ordering testing on family members of this individual.

Test results should be interpreted in the context of clinical findings, family history, and other laboratory data.

Misinterpretation of results may occur if the information provided is inaccurate or incomplete.

ADDITIONAL INFORMATION

Fluorescent DNA sequence analysis was used to test for the presence of mutations in all 9 exons and exon-intron boundaries of the TGFBR1 gene (GenBank accession number

If the patient has had an allogeneic blood or marrow transplant or a recent (i.e. less than 6 weeks from time of sample collection) heterologous blood transfusion these results may be inaccurate due to the presence of donor DNA. Laboratory developed test.
