

Mumps Virus Antibodies, IgG and IgM  
(Separate Determinations), Spinal Fluid

Patient ID <b>SA00060667</b>	Patient Name <b>TESTINGRNV, CMUMP_ABNORM</b>	Birth Date <b>1984-05-05</b>	Gender <b>M</b>	Age <b>29</b>
Order Number <b>SA00060667</b>	Client Order Number <b>SA00060667</b>	Ordering Physician <b>Client, Client</b>	Report Notes	
Account Information <b>C7028846 DLMP Rochester</b>		Collected <b>13 Aug 2013 00:00</b>		

## Mumps Virus Ab, IgG and IgM, CSF

### Mumps Virus Ab, IgG

 **1:40**

**Abn**

Detection of organism-specific antibodies in the CSF may suggest central nervous system infection. However, these results are unable to distinguish between intrathecal antibodies and serum antibodies introduced into the CSF at the time of lumbar puncture or from a breakdown in the blood-brain barrier. The results should be interpreted with other laboratory and clinical data prior to a diagnosis of central nervous system infection.

SDL

Reference Value  
<1:5

### Mumps Virus Ab, IgM

 **≥1:10**

**Abn**

Results suggest recent infection.  
**SEMI-URGENT RESULT** Detection of organism-specific antibodies in the CSF may suggest central nervous system infection. However, these results are unable to distinguish between intrathecal antibodies and serum antibodies introduced into the CSF at the time of lumbar puncture or from a breakdown in the blood-brain barrier. The results should be interpreted with other laboratory and clinical data prior to a diagnosis of central nervous system infection.
