HIV-1 Direct Antigen (NON-ICD)				REPORTED 10/12/2009 13:02	
HIV-1 p24 (NON ICD) Antigen Screen Interpretation		Negative Negative			

Reference Range: Negative

The HIV p24 antigen detected by this method has not had the immune complexes dissociated; therefore, the antigen value represents the non-complexed p24 antigen level.

The measurement of the p24 (core) antigen has been shown to be useful in detecting circulating, replicating HIV, as well as nonviable HIV. The measurement of p24 can be used to 1) Diagnose early disease states 2) Correlate antigenemia with severity of disease and 3) Monitor effectiveness of therapy.

This assay was performed using a kit labeled "For Research Use Only" by the kit manufacturer. The kit's performance characteristics have been established and validated by Focus Diagnostics for in vitro diagnostic use.

Test Performed By: Focus Diagnostics, Inc.
5785 Corporate Ave.
Cypress, CA 90630-4750
